OBJECTIVE

A results-driven and detail-oriented AI Engineer and Researcher seeking an Applied AI Developer position, where I can contribute to designing and deploying production-grade AI systems. I aim to leverage my hands-on expertise in OpenClaw Agent building, LLMs, RAG architecture, NLP pipelines, LangChain, vector databases, and cloud infrastructure to build scalable, intelligent solutions that drive operational excellence and business value within a dynamic, innovation-focused environment.

TECHNICAL SKILLS

- **AI & Machine Learning:** Python, Scikit-learn, TensorFlow, Supervised & Unsupervised Learning, Regression, Classification, Random Forest, Decision Trees, Reinforcement Learning
- **Deep Learning & NLP:** ANN, CNNs, RNNs (LSTM), YOLO, Transfer Learning, BERT, Transformers, TF-IDF, Word2Vec, Text Classification, Summarisation, Information Extraction, Q&A Systems
- **Generative AI & LLMs:** OpenAI API, Hugging Face, Prompt Engineering, Fine-tuning LLMs, GANs, VAEs, Diffusion Models, LLM Selection & Optimisation
- **RAG & Vector Databases:** RAG Architecture Design, AI Embeddings, Chunking Strategies, Pinecone, Weaviate, Chroma, FAISS
- **LLM Orchestration & Agentic AI:** LangChain, LlamaIndex, LangGraph, AutoGen, SmolAgents, Multi-step Reasoning, Knowledge Base Integration
- **API & Backend Development:** REST API, FastAPI, Scalable API Design, Frontend-Backend Integration
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, Bedrock, SageMaker), Docker, Kubernetes, Istio, CI/CD, Model Versioning, A/B Testing
- **Other:** Data Structures & Algorithms (DSA), Human-Computer Interaction, Next.js, Python, SQL databases, NestJS, Next.js, JavaScript, OpenClaw Agent Builder

PROFESSIONAL EXPERIENCE

AI/ML Researcher & Software Engineer

PAP International Ltd.

Mohakhali DOHS, Dhaka

- Designed and deployed production-ready AI pipelines, including NLP-based classification, information extraction, and document intelligence using Python, LangChain, and OpenAI API.
- Built multi-source data ingestion pipelines handling REST APIs, SQL/NoSQL databases, and document files (PDF, DOCX, CSV) with data quality controls and versioning.
- Developed scalable REST APIs to expose AI capabilities to frontend applications, optimising for latency and cross-team integration.
- Optimised LLM selection and integration across projects based on cost, performance, and security requirements.
- Consistently delivered solutions under strict deadlines through effective prioritisation and cross-functional collaboration.

Research Assistant & Research Team Lead

AIRIL — AI Research & Innovation Lab

Asad Ave, Dhaka 1207

- Mentoring three active research teams on applied AI projects in healthcare, NLP, and explainable AI (XAI).
- Developed deep learning pipelines for cancer classification, human activity recognition, and disease diagnosis using CNNs, ANN, BERT, and ensemble methods.
- Contributed to 6 research papers: 2 published in international journals, 1 submitted to the Healthcare Analytics Journal.
- Maintained performance tracking dashboards and coordinated cross-team project reporting.

Team Leader

AIIESEC Bangladesh — Local Committee

Dhaka South

- Led a team of 4 in executing cross-functional events, ensuring on-time delivery under strict deadlines.
- Monitored performance, provided constructive feedback, and maintained a high-productivity team culture.

Volunteer — IT Support

Sholoana Foundation & Ashia Foundation

Dhaka

- Provided IT support, including setting up and maintaining computer systems and technology infrastructure.
- Mentored new volunteers and assisted in organising medical campaigns and community programs.

RESEARCH PUBLICATIONS

- **[Published]** Advancing Monkeypox Diagnosis: A Novel Approach Using Custom Neural Networks.
- **[Published]** DeepResVit: A Hybrid Deep Learning Approach for Ovarian Cancer Classification with XAI.
- **[Submitted]** An Explainable Hybrid CNN-ANN Model for Smartphone-Based Human Activity Recognition in Healthcare Analytics. (Healthcare Analytics Journal)
- **[In Progress]** AeroLung AI: An Explainable Machine Learning Framework for Lung Cancer Prediction in Smart Healthcare Systems.
- **[In Progress]** Interpretable Machine Learning Techniques for Human Activity Recognition using Transfer Learning.
- **[In Progress]** Improving Liver Disease Diagnosis through Ensemble Machine Learning Techniques.

KEY PROJECTS

Human Activity Recognition

Python, CNN, LSTM, Deep Learning

Built a cost-effective deep learning pipeline for recognizing human activities from sensor data with high classification accuracy, applicable to health monitoring and security surveillance.

Term Deposit Prediction

Python, Classification, Bayesian Auto-Tuning

Developed a customer subscription prediction model using classification algorithms optimised with Bayesian auto-tuning to enable targeted marketing strategy decisions.

Emergency Helpline Management System

NestJS, Next.js, REST API

Designed and built a full-stack platform connecting civilians with emergency services (police, fire) through a real-time complaint and response management system.

Dhaka Guide

Java, Console Application

A console-based information retrieval system for querying details about universities, hospitals, tourist spots, and transportation across Dhaka.

EDUCATION

Advanced PG Certificate — AI Engineering on Cloud and AIOps

FutureSense & Indian Institute Of Technology Roorkee

BSc in Computer Science & Engineering

American International University-Bangladesh (AIUB)

Higher Secondary Certificate (HSC)

Govt. Science College

Secondary School Certificate (SSC)

Rajendrapur Cantonment Public School & College

ACHIEVEMENTS & LEADERSHIP

- Twice mentioned in the Dean's Honourable Mention List at AIUB — recognition of consistent academic excellence.
- Awarded the Emerging Leader Award by DMH Foundation in 2024.
- Currently mentoring three research teams at AIRIL on applied AI and healthcare research projects.

LANGUAGES

Bengali (Native)

English (Proficient)

Hindi (Conversational)
